

1. Externally, only the discreet lock and weatherproof cap can be seen.

If required, the door sticker can be used to deter potential thieves.

2. To open, simply insert the key and turn a quarter turn anti-clockwise then remove key

3. At the turn of the key, the STOPPA security arm swings to the side in the open position.

4. When STOPPA is locked, the main arm swings down to secure firmly into the base plate.

5. With STOPPA in the locked position, any external force on the door is resisted.

6. The unique design of STOPPA effectively braces the garage door to resist attack.
